

Offset Chair

Offset Chair is a dining chair shaped for comfort and defined by a strong visual presence.

Two continuous steel lines in chrome or black outline the chair, with the back legs sweeping forward to meet the backrest, creating its distinctive offset profile. The result is a light, open expression that fits naturally into dining rooms, workspaces, cafés and shared settings.

It ships flat-packed and assembles with ease. The steel sides connect beneath the seat, while the seat and backrest lock into place to form a stable structure with minimal components. Offset Chair is available with either a wooden seat or an upholstered seat for added comfort.
